9th Generation Digital Cardboard Photography System

The latest ninth-generation cardboard digitization system by makes photo capturing faster and more precise. To use it, simply place the cardboard or paper sample in the photo area and the dedicated camera instantly transfers the image to the computer. Within just one second, physical patterns are digitized. Important details such as notches, internal markings, fabric lines and hole positions are captured and can be directly edited in the software. This eliminates the time-consuming process of manual input on traditional digitizers while maintaining an accuracy level within 1 mm. The system also includes an instant editing function for modifying pattern details.

System Components

Licensed software with encryption key

Professional-grade camera with dedicated light racks

Magnetic fixing blocks for secure sample placement
